

MKE work with a vast array of customer assets and with our continually increasing footprint, capabilities and resources, this allows us to continue to drive innovation and exceed our customer's expectations. This was a unique project undertaken by MKE for a local brewery facing a critical challenge with a century-old, bespoke piece of equipment crucial to their production process.

THE CHALLENGE:

Our client came to us with a unique problem - they possessed a bespoke, one-of-a-kind piece of equipment that had been an integral part of their production for over a hundred years that needed an upgrade. Their brewery has been operating in the UK since 1698, making it one of the oldest producing breweries in the country and finding a replacement was not going to be easy. The refurbishment was imperative for the brewery's continued operations.

THE SOLUTION:

MKE's expert team took on the challenge by carefully stripping the historic system down to its bare components. This process involved a comprehensive examination of each part to assess its condition and identify areas that required restoration. The team then executed a thorough cleaning and restoration process to bring each component back to its optimal state. With precision and care, the team reassembled the equipment, ensuring it returned to its original functioning state.

SUMMARY

The result of MKE's efforts exceeded the client's expectations. The brewery's original equipment was not only restored to operational efficiency but also showcased a level of craftsmanship that delighted the customer. The success of this project established MKE as a trusted partner for asset restoration and the customer will be speaking to us again when another historic system needs bringing back to life!
